

The DuKane 576-75 VIEWER

...the ultimate reader for unitized film.

SPECIFICATIONS

Model 576-75
Overall Dimensions 21"x17"x17"
Screen Size 11"x14"
24X Magnification

To satisfy the demand for a precision engineered reader combining quality construction, attractive appearance, modern styling with simple, fool-proof operation, DuKane has introduced the 576-75 Viewer. It features 24 times magnification and a 11" x 14" screen, which enables the user to view enlargements of most original material. Sharpness of focus and outstanding resolution are the results of the superior optics used in the 576-75.

Other features include front film loading, spring loaded glass flats to prevent film buckling. A single scan knob is used for both horizontal and vertical scanning.

The location and viewing angle of the non-glare gray screen reduce eye fatigue. Attractive modern design and appearance of the DuKane 576-75 Viewer complement any office, library or hospital decor.

AN IMPORTANT ANNOUNCEMENT FROM

DUKANE

Recently we have added another aperture card reader to our line in response to both customer and dealer demand. This unit, our model 576-80, is similar in appearance to the popular 576-70 but modified to accept aperture cards in which the microimage has been mounted in the "left hand" side of the card. This versatile reader will also accommodate standard cards, both vertically and horizontally. List price for the 576-80 is \$209.50.

MODEL 576-80

An accessory roll film attachment for the 576-80 has also been added to the Dukane line. The model 99A285 roll film adaptor, as it has been coded, will handle 100 foot reels of both sprocket and sprocketless film. Due to the unique design it is possible to scan each image. The entire assembly is easily removed for cleaning the glass flats. The roll film attachment is perfect for those applications where both microfilm in rolls and aperture cards are used. List price for the 99A285 is \$24.50.
